

VENTE NEUF

Océan Développement MODX70

## DESCRIPTION

---

Embark on a new era in yachting.

Ganany is a catamaran of over 21m built using bio-sourced materials. The concept uses and develops innovative solutions.

Ganany offers over 200m<sup>2</sup> of living space, divided between the forward and aft cockpits, with several great sofas and sun loungers, a spacious saloon and 4 Queen guest cabins (two of which can be converted into twins).

She is managed by three crew members, including a chef, who will take care of the guests, allowing them to disconnect and live to the rhythm of the sea and its soothing environment.

she is an ultra-innovative boat in terms of its design and the programme for which it was built, cruising at the top of the range and reducing the carbon footprint of the boat and its use as much as possible.

Right from the construction stage, the materials have been bio-sourced, and everything has been designed to be virtuous. The boat is equipped with two inflatable and automated wings, offering 35% more efficiency.

When sailing under the wings, the boat will produce electricity with the propulsion propellers, which will be transformed into a hydro generator. To complete the package, the boat has 70M<sup>2</sup> of solar panels, rainwater recovery for the toilets, and 100% renewable energy to be self-sufficient.
