

VENTE NEUF

WIDER STERN

25 500 000 € TTC

DESCRIPTION

STERN's innovative design is aimed at allowing the owner and guests to become closer in contact with the water. She was awarded the winner at the 2019 World Superyacht Awards, recognized for the innovative diesel electric technology with modern hybrid azipod system, enabling extremely quiet operations with a zero emissions mode. Powered by four marine diesel generators, coupled to alternators and to electric motors linked to a power management system in conjunction with the latest battery technology, the power runs the hotel load and propulsion to two azipod drives offering diesel and electric drive. The modern propulsion solution allows for a industry shift in the engine room space and layout configuration and positioning which has enabled the designers to optimise the hull space to greater scope and use for guest comfort and use of space. Accommodation for 10 guests in 5 exquisite and luxurious suites.
